

Cost Effective Modernization with Mobile-Friendly Reporting Systems On The Go

Winter Park Construction

Key Challenges

- On-field staffs were reporting their daily work activities through manual data entry
- Project engineers have to go headquarters office to submit the daily reports
- Managers find it difficult to manage and keep track of multiple reports
- The travel expense of the staffs involved in reporting was very huge

Solutions

- Understood the reporting structure of WPC and developed a user friendly web & mobile app
- The solution includes field force management, dynamic CRM and mobile reporting tools
- Enhanced reporting - a single report generation via app and multiple reports using SSRS
- Utilized modern technologies: Microsoft Dynamic CRM, MVC, ASP.Net, JQuery and JS

Results

- Allowed on-field staffs to efficiently submit their daily work reports on the go
- Set a clear and structured reporting process which in turn enhanced WPC's productivity
- The application has helped WPC in saving time, money and resource effectively
- The app is compatible with desktop, mobiles and tablets with a responsive design layout which has helped the engineers to keep track of the daily reports anytime, anywhere
